Drive in racking system

Drive in racks have almost twice as much storage capacity in the same space as regular pallet racking, because the aisle between rows of racking shelf are eliminated and racking shelves are consolidated so that goods on the same floor and in the same row can be placed next to each other, maximizing storage capacity utilization.

Drive in and through rack is widely used for one sort of goods with large quantity, this kind of goods packaging uniform, single products, such as: food, tobacco, cold storage warehouses.

Principle of storing goods and taking goods: First in, last out and Last in, first out.

Features of drive in racking system

1. Drive in drive through systems provides maximum storage capacity using the minimum amount of the space
2. It is particularly suited to store very large quantities of homogeneous products.
3. Drive in drive through systems racks operate on the basic first in last out.
4. Compatible with many handling equipment styles.
5. The height between levels can be adjusted easily by 75mm assemble quickly and easily with a hammer or mallet. Widely used in cold room warehouse.
6. Shelves can be adjusted per 75mm pitch.
7. Corrosion resistant: Tough power coat finish resists rust and catches.
8. Each shelves holds up to 100 to 4500kg.
9. Sturdy industrial strength steel construction.

Component:

Main component: Upright(post), box beam, row bracing, pallet rail, pallet stopper,top beam

Accessory: Post protector, crash barrier.
